

17. Performance of Low Pollution Paints for Building Envelops - Part 2 An Exposition One-year Result and Expectation of Dirt -

Yusuke Nakamura, Masafumi Moteki, Yoshio Ogawa

The paint which prevented a dirt of the building appearance spread. On the other hand, because there is not a unified performance evaluation method, there is not a criterion at the time of the choice. Therefore I perform an outdoor exposition examination for 58 kinds of paint. We report analysis of data for outdoor exposition one year.

Key words : outdoor exposure examination, water contact angle, rain muscle dirt, short-term evaluation
